1 What is axesPDF QuickFix?

1.1 Find and fix accessibility issues easily to comply with PDF/UA

In short words

axesPDF QuickFix is your time-saving tool to check and remediate PDF documents during the process of making them fully accessible and compliant with PDF/UA, WCAG 2.1 or Section 508. Accessibility issues are easily found and most of them are fixed instantly with a single click.

1.2 Accessible PDF simply done!

Important

Precondition for working with **AXESPDF® QUICKFIX** is, that your PDF document has already a tag structure. If this is not the case then first create a PDF with tags – either from converting the source document or subsequently with a PDF editor.

1.2.1 See and locate problems immediately

Start with the tab checker. All machine-checkable requirements of PDF/UA are supported. Reported issues lead you directly to the related location in the document and the logical structure view.

1.2.2 Fix with one click

Fix an issue for the whole document by clicking one button – for example „Add Note IDs“ or „Artifact non-tagged Content“.

1.2.3 Edit all in one view

With axesPDF QuickFix you have a clear PDF accessibility dashboard: logical structure pane, document view and the context sensitive properties tab. The best: You can edit properties and attributes of multiple tags at once – for example adding scope to table header cells.

2 What makes axesPDF QuickFix outstanding (“the killer arguments”)

- **CHECK PDF/UA** | Checking for PDF/UA becomes a no-brainer. The structured report shows a summarized result of all 89 machine-checkable failure conditions.
- **DETAILED EXPERT VIEWS** | Views for diagnosis and editing: Checker with report, Properties, Settings, Role Mapping, Destinations, Logical Structure.
- **SEARCH IN LOGICAL STRUCTURE** | Browse the tag tree with quick navigation features: jump from one tag to the next with the same structure type or use the tag search.
- **SELECT TAGS WITH EASE** | Select any tag directly from the Document View. The tag is automatically highlighted in the Logical Structure View. And you get a context sensitive view of all related properties.
- **SCREEN READER PREVIEW** | Simplified structure view for a quick visual evaluation. Check the logical order and the semantics to see what a screen reader would read.
- **FIX UNICODE ISSUES** | Unicode issues are no longer a show-stopper. Now you have full control of the mapping in an easy-to-use editor.
- **CREATE DESTINATIONS BASED ON STRUCTURE ELEMENTS** | It is possible to link footnotes, indices or other internal links so that they are usable with screen readers.

3 Feature highlights

- **RENAME TAGS:**
Renaming all tags with the same name in your document in one step.
- **DELETE EMPTY TAGS:**
Clean your tag tree by deleting all empty tags at a single blow.
- **ADD NOTE IDS:**
Add a unique ID to every Note tag in the document.
- **FIX PLACEMENT:**
Fix placement attributes of figure, form, formula or note tags in one step.
- **REMOVE LOGICAL STRUCTURE:**
Delete the complete tag tree properly to prepare manual tagging from scratch.
- **ARTIFACT NON-TAGGED CONTENT:**
Mark every non-tagged element in your document as an artifact.
- **INSERT SPACES:**
Insert missing spaces between words based on customizable settings.
- **REMOVE LANGUAGE ASSIGNMENTS:**
Delete language settings for every tag and/or marked content.
