THE IDEAL COMPLEMENT TO SCANNER VISION™

INTRODUCTION

aivika search

Aivika Search is the perfect partner for ScannerVision. AivikaSearch starts working where ScannerVision ends, in the document repository. Now, with Aivika Search we'll be able to enjoy powerful searching, indexing and retrieval capabilities, all quickly executed and, of course, with the utmost security and confidentiality.

Aivika Search allows us to define an intelligent indexing logic that provides a fully automatic and unattended sorting of all documents scanned in your day to day, no more classify documents by type, vendor, customer, etc., before you can scan them: now, with AivikaSearch it is as simple as placing all documents in your scanner's document feeder and clicking on the desired option in the

multifunctional panel; AivikaSearch's intelligent indexing will handle everything else!

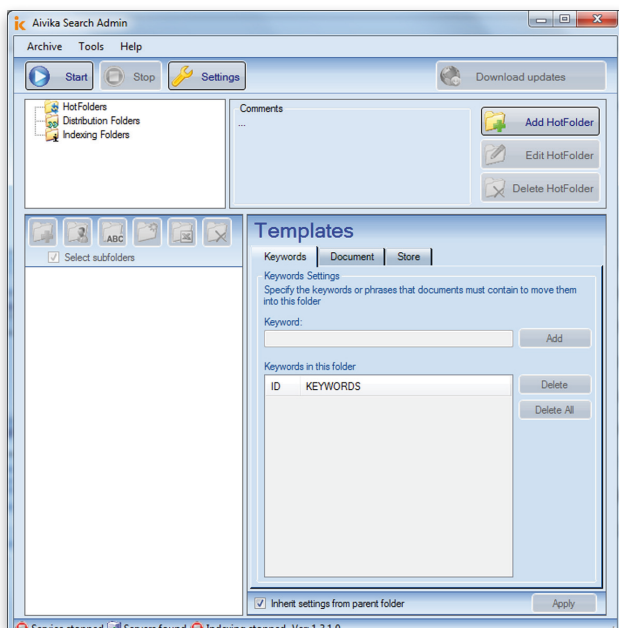

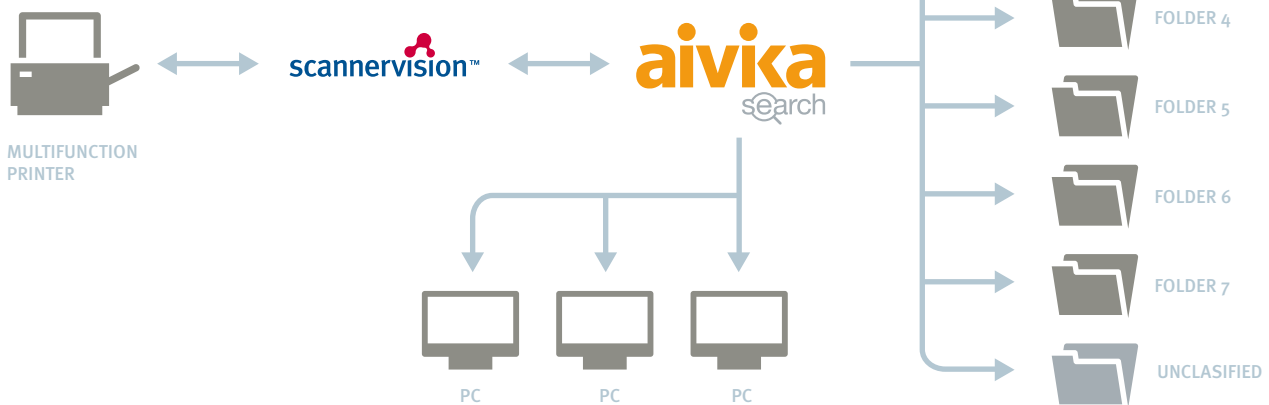

Aivika Search also provides a powerful yet simple search system via a web interface. Forget about installing complex software on every computer in the office, anyone with the necessary permissions will immediately be able to view and retrieve documents from the digital repository.

CLOSING THE RING

The ideal complement to Scanner Vision™

With ScannerVision we can turn our multifunctional device or flatbed scanner into a powerful gateway to let digital documents into our office. With the flexibility provided by its working system through configurable templates, ScannerVision is able to adapt to any working environment in the most simple way.

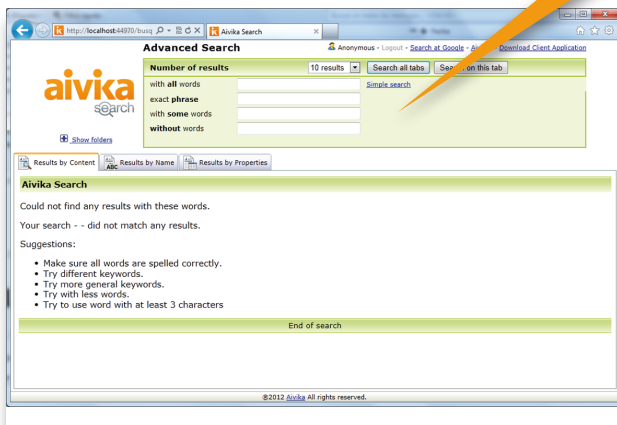

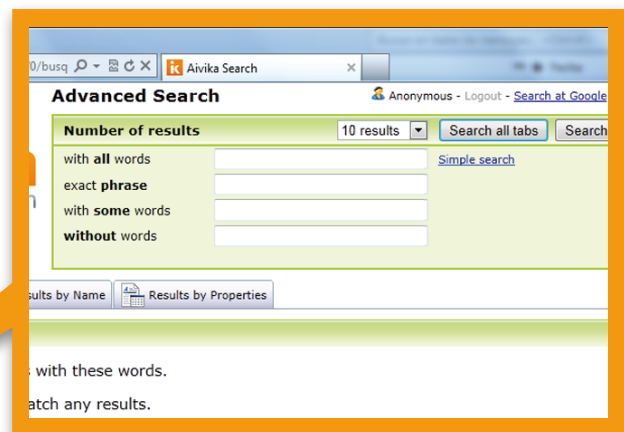

Now, with AivikaSearch we can give a new dimension to the folder structure generated from ScannerVision. Once templates are configured and the structure of our repository defined, AivikaSearch is able to add a logical indexing and automatic routing rules, thus creating file structures or inserting metadata to documents generated in a totally unattended way. You only need to worry about placing the originals in the scanner or MFD. Once documents are scanned, they will be automatically delivered to the correct location!

CLOSING THE RING

Quick Search and Recovery of documents, simple and accessible to all

Aivika Search features a web interface that allows, with all necessary permissions, to query and retrieve scanned documents immediately. The advanced interface with thumbnail preview allows to see the content before opening a document, streamlining and optimizing query access time to documentation.

The search interface allows Aivika Search to perform integral searches by several parameters as, for instance, contained word, date, part of a word, etc. It also offers the chance to narrow the search to the repository area we decide, thus optimizing the results. When we want to open a document, we simply need to click on it, and Aivika Search Client will select the native application with which it was created and can work directly with the document.

SPECIFICATIONS
